## **RE: Richardson Flat Quarterly Status Report for April through June 2008**

Dear Ms. Hernandez:

This Quarterly Status Report details site activities conducted at Richardson Flat for April through June 2008.

### **Sampling Activities Conducted:**

One confirmation sediment sample was collected after a portion of the South Diversion Ditch (SDD) adjacent to the Park and Ride (P&R) was remediated. The sample was collected below the P&R entrance road where a culvert was placed in the SDD prior to fill placement. A Site Plan for the Park and Ride area is presented in Figure 1.

Three samples were collected from imported soils as required by the Remedial Design/Remedial Action Work Plan (RD/RA). One composite sample was collected from each of three onsite stockpiles. Each composite sample consisted of five subsamples.

Four personnel air samples were collected during remedial activities. Ambient air samples were collected upwind and downwind, and two samples were collected which represented worker exposures.

XRF screening was conducted on an as-needed basis concurrently with soil importation and remedial activities. The XRF was used for field guidance only during this time period.

All sampling was conducted in accordance with the RD/RA Field Sampling Plan (RMC, 2007).

### **Results:**

The sediment sample collected from the remediated portion of the SDD below the P&R entrance road crossing contained 15 ppm arsenic and 190 ppm lead. The sample was collected from native soils prior to construction of the P&R entrance road. The lead concentration was below the sediment PRG of 350 ppm.

Sample results from soil imported from a hospital construction project indicate a range of <5.7

ppm to 7.4 ppm for arsenic and 7.9 to 41 ppm for lead. The range of lead concentrations is below the Site soil PRG of 500 ppm.

Air monitoring sampling results are presented in Table 1. All air monitoring results are below OSHA Action Levels and Permissible Exposure Limits.

#### **Other Activity:**

Park and Ride Construction – Construction of the Park and Ride Lot (P&R) in Task Area 1 started during June 2008. Park and Ride construction consisted of placement and compaction of fill and the construction of the entrance road, which included the installation of a culvert in the SDD.

The South Diversion Ditch and an area of adjacent tailings were remediated as part of P&R construction. During the excavation activities associated with the P&R, an area of tailings was observed between the containment berm and SDD. The area of tailings is presented in Figure 1. Some of these tailings appeared to be saturated. Remediation was undertaken to isolate shallow groundwater and surface water from the tailings. Remediation consisted of the removing the saturated tailings and sediment from the SDD. A segment of the SDD was enlarged as part of this remediation. Enlargement of the SDD will eventually increase wetland area and offset the loss of wetlands resulting from the construction of the P&R entrance road. Remediation was conducted in accordance with procedures described in the RD/RA Work Plan (RMC, 2007). The area that underwent remediation is presented in Figure 1.

The pond located the downstream end of the SDD is being enlarged. The clayey gravel removed from the pond is high quality fill material and is being used as fill for the Park and Ride entrance road where it crosses the SDD. Increasing the size of the pond and associated wetlands will be used to offset Natural Resource Damages (NRD).

Fifty Austree hybrid willow trees (*Salix Matsudana X Alba*) were planted in the Cottonwood Wetland. The tree planting area is presented in Figure 1.

United Park submitted the Task 1 Field Construction Plan, Task 1 Task Completion Report, Certificate of Completion for Task 1 and a revised draft Operations and Maintenance Plan on June 26, 2008.

EPA conducted a site inspection on June 20, 2008 as part of the Task 1 completion process.

Approximately 17,000 cubic yards of material were imported from the Montage Hotel construction site location in Empire Canyon. Much of it was used during the Park and Ride Construction.

#### **Planned Activities: July through September 2008**

Park and Ride Construction will continue. Construction will consist of the placement and compaction of fill, grading of drainage features, paving and revegetation. The P&R should be completed during this time period.

RMC will submit the Task 2 Field Construction Plan and conduct remediation in the Task 2 Area. RMC will submit additional Field Construction plans as required.

RMC will collect import samples for every 5,000 cubic yards in accordance with the Field Sampling Plan (RMC, 2007). Additional opportunity samples will be collected as required.

If you should have any questions or comments, please contact me at 801-255-2626.

Best regards,

A handwritten signature in black ink, appearing to read "Daniel Dean".
